I haven't received an invite. I'll get Mark to compile tables to compare results to both Industrial and Residential Screening levels. I don't think we've received all the Pit data yet (EPA Lab), but as their email indicated the final report should be in my the 24th.

Jeff:

The data will likely not change much from the preliminary data. I would say to go ahead and start evaluating the data so we can determine if solidification is actually an option. We probably should touch base with ERT to see if they have any suggestions on add mixes if we are able to do the solidification along with possible vendors or people that can do treatability studies. I have a meeting with Brenda on Tuesday. Have you guys been invited?

Thanks

I've checked our latest base report and it looks like we have about \$20,000 remaining. I'm in the process of checking to make sure that all shipping, equipment and other related expenses (eg. Geoprobe and boat services) have been applied to the project. In regards to review, I'm not proposing to do any data validation. I just want to do a cursory review of the preliminary data compared to the final report. Yeah, the EDDs are loaded directly into SCRIBE and then it's "published" and available for Flex Viewer. I'll get Mark Balhoff to compile the data tables. Would you like a set of tables with the results compared to Industrial Screening standards and a set compared to residential?

Once everything is received we should discuss the results. Just a few things to think about: Is there a potential of additional sampling? If so, would you want to do that under this TDD? We also have the 5-gal pails of pit material that can be used for Treatability Testing. If tested, would you want those results included in this report.

Thanks,

Jeff:

Are we ok with funding at this point?

The issue of reviewing the final laboratory data reports: What exactly are you wanting to review. As you know, these are validated by ESAT. It is my understanding that the EDDs are loaded into SCRIBE and then then you can pull different view from SCRIBE as well as that data being available for the Flex.

I can certainly extend the date of the TDD. Do you have a recommendation?

Thanks

Gary –

Just wanted to give you an update on Delta Shipyards data. We have received the preliminary data from the CLP labs for the extent of contamination sample locations. All the data is going through Michelle and she is having it uploaded into Scribe. I would like to review the final laboratory data reports before we start compiling data tables to ensure the preliminary reports are correct. The EPA data is still trickling in, looks like the final data report from them will be received by 9/24/12. We will upload the data onto Flex Viewer once everything is received and verified. Does this sound okay to you?

Also wanted to let you know that the TDD completion date is 11/01/12, which makes the interim due date 10/01/12. We will not be able to have the interim report submitted by then but we will be fine with the final completion date.
